

## 6 Steps of Hygienic Hand Disinfection

Hand disinfection according to the European Standard EN 1500.

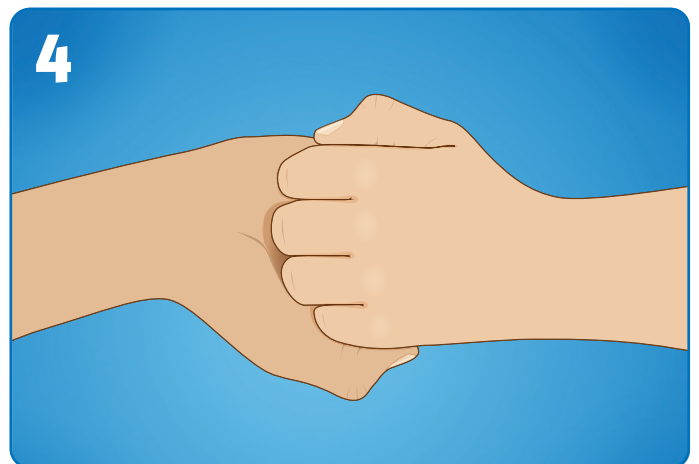

Rub the disinfectant between the palms and onto the wrists.

Rub the right palm over the back of the left hand, and vice versa.

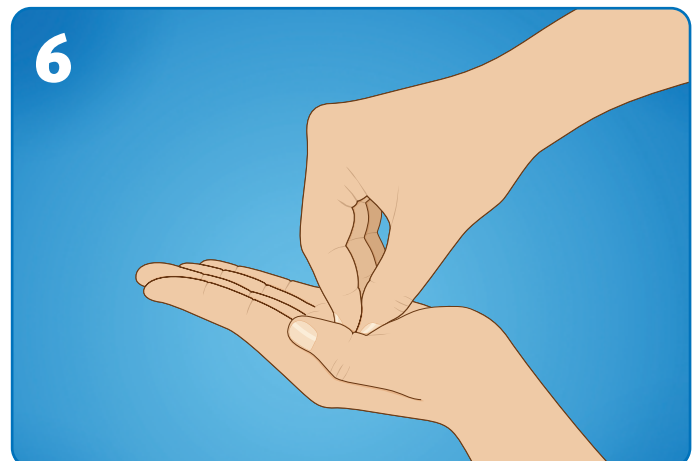

Rub both palms against each other, with the fingers spread out and intersecting.

Clasp the upper side of the fingers with the palm of the adjacent hand.

Rub the right thumb circularly in the closed palm of the left hand, and vice versa.

Circularly move the closed fingertips of the right hand on the left palm, and vice versa.
